

BENEFIT MANAGEMENT SUITE

Pendylum's Benefit Suite is built upon a flexible, robust eHR business Rules Engine that supports multiple types of benefits ranging from medical, dental, disability, RRSP, and life insurance. It also handles non-traditional benefits and company specific perks.

The Benefit Suite controls policies, eligibility, procedures and rules. Benefit costs are controlled through automated technology that ensures compliance and provides a simple way of reconciling carrier bills. Error-prone paper processes are eliminated through seamless integrated connectivity. By employing our Import/Export Engine, the Benefits Suite is able to exchange and generate data for third party payroll systems and benefits providers. The Benefit Suite pays for itself in months and provides a quick R01.
