

Pendylum Professional Services

From consulting, solution design and software development to application support, maintenance and enhancements, Pendylum provides full-cycle software and professional services through a mixed delivery model. Our on-site technical and business analyses provides a compelling opportunity to get the solution you need quickly and at reduced development costs. Pendylum is an experienced, technically proficient outsourcing partner who can help you maximize the investment in your software solutions.

Pendylum: Transforming Ideas into Results

At Pendylum we thrive on the challenge of designing new products - it give us an opportunity to demonstrate both our creativity and our superior abilities. For Pendylum, there is nothing more rewarding than a satisfied customer. We believe that project development is much more than just coding, and that delivering what the customer needs is only the first step in an ongoing relationship. We strive to provide our customers with the best possible solution and the best product on the market. When Pendylum developers take on a project, it is as your *partner*, working together with you to fully understand your needs and your business drivers. This cooperative dynamic produces results -- guaranteed!

Pendylum Professional Services for Maximum ROI

Mission critical legacy applications can take years to build, evolving as your company's needs change. Pendylum's ability to interface your legacy products to new systems helps ensure the continuity of these applications while harnessing the power of new technologies, such as web-based systems. Pendylum employs highly-trained and experienced software engineers, business analysts and senior project managers to help build flexible and extendable business solutions for our customers, providing on-site consultation, project management, design and implementation as needed. Pendylum's professional services offering includes:

- ➔ Systems consultation and design services (for Payroll, HR, ERP, etc.)
- ➔ Business process re-engineering, due diligence, analysis, and requirements gathering
- ➔ Application development (client server, web-based, mobile apps, etc.)
- ➔ Full testing in a production environment
- ➔ Ongoing software support & maintenance

The Pendylum Advantage

When you partner with Pendylum, you'll benefit from years of cross-industry expertise in building custom enterprise applications that automate business processes and improve both operational efficiencies and managerial effectiveness. Our proven project delivery methodology and phased-gate approach means zero integration/start-up periods and fast, measurable results.

"Our savings went directly to the bottom line, and the implementation was clean. We were very impressed with Pendylum's professional approach."
