

Pendylum Scheduler

Pendylum's powerful Scheduler, seamlessly integrated with the Pendylum Time & Attendance application, facilitates the scheduling of a large number of employees quickly and easily, even in complex multi-shift or union environments.

The Scheduler is a robust and easy-to-use tool capable of presenting "what if" scenario analysis that ties in revenue, budget information or other business drivers with complex workforce scheduling rules. Schedules can be created as far into the future as needed, with easy visibility of vacations and other absences to ensure proper coverage at all times.

The Pendylum Scheduler gives you the power to analyze such information as Planned versus Actual data, as well as providing a detailed breakdown of labor costs including regular time, overtime, shift differentials, cost centers and more, helping you reduce costs and avoid any unexpected labor expenses.

The Right Employee at the Right Time

With Pendylum Scheduler, you can choose employees to fill a position based on several factors, including availability, training, skills, location, and more. Scheduling reports can be printed for posting, or are available to employees and management online via Pendylum's Self-Service options, to make shift trading and filling open shifts quick and easy.

Pendylum's eBusiness Rules Engine helps ensure compliance with complicated scheduling requirements as dictated by collective bargaining agreements, government regulations and company policies. Easily visible alerts will warn managers when employees have been under-scheduled or will be in an overtime pay position, helping to control costs and prevent costly grievance actions.

Built For Complex Environments

The Pendylum Scheduler was originally built to handle the complex 24/7 requirements of the health care industry, making it robust enough for even the most challenging scheduling environments in other industries such as manufacturing, retail, and more. With the ability to schedule employees into specific jobs, you'll never be caught short-staffed, even during peak times.

"We've used the Pendylum scheduling software for more than 6 years. Our scheduling complexities are many, and the software is flexible enough to accommodate all of our needs - even in a three-shift environment."
